Cosmetic, Implant, Restorative and Laser Dentistry

NEWSLETTER

Fall 2011

We are pleased to send you our annual Fall/Winter Newsletter. This update provides you with the exciting changes in dentistry and more in particular, our office.

I have just returned from my annual dental meeting with the American Society of Dental Aesthetics. I have received an "accreditation award" in this aesthetic society. Many dentists practice some type of aesthetic dentistry but very few achieve this acknowledgement. I am quite proud of this accomplishment and wanted to share this information with you.

Dentistry continues to evolve with advancements in all phases of the field. These continued changes have affected the technique and materials for crowns, implants and cosmetics that are used in our "state of the art" office.

Implant crowns have been used in my office for over 20 years. When possible, they have become the primary treatment plan for replacement of single or multiple teeth. Their success rate is phenomenal. Many of you have personally acknowledged the ease and practicality of this procedure. Implants can also replace removable bridges (dentures) with permanent cemented crowns. Therefore, you will not have teeth that come "in and out." Please check out DrElson.com for more information.

I want to remind all my patients who are due for their recall exams, those who are overdue, to please make an appointment. Those of you who have dental insurance, or can be reimbursed by your flex plan, please make sure to maximize your benefits for the year of 2011.

Once again we appreciate all of your family and friends that you have referred in the past and will continue to welcome any additional referrals in the future.

As always, best wishes for a healthy and a happy coming New Year.

Sincerely,

Lewis I. Elson, D.D.S., P.C.
